DUST CONTROL

DUST EXTRACTORS & DUST COLLECTORS

LAGUNA

Cyclone Dust Extractors

The particles in a cyclonic swirl increase in velocity, creating higher CFM (Cubic Feet per Minute) and higher static pressure.

Larger and heavier particles slow down when meeting the crossbar and settle in the drum. Only the finer dust gets carried with the air stream up through the centre vane, through to the filter. All workshop air is returned filtered through the HEPA or 1 Micron canister.

LAGUNA P-FLUX 3 Series Cyclone Dust Extractor

Part No. **LGT-PFLUX3B**

- 2200 W (3 HP) 32 A induction motor

Why a dust-collector?

A clean, dust-free work place is not only safer, but far less work in the long run. There is less clean-up and less airborne dust, which is very important when it comes to the finishing stage and your health. Carbatec offer many options in dust collection from small units designed for single machines to large units capable of connection to multiple machines.

CARBATEC 15" 3-1/2 HP Thicknesser with Helical Cutterhead

Part No. **TH-X381C**

- 2600 W (3 1/2 HP) induction motor
- True helical cutterhead with 74 insert knives
- Max. cutting width 381 mm

Instead of one full width blade striking the board, a true helical cutterhead features a series of smaller, four-sided solid carbide knives, wrapped around the cutterhead in a helical pattern. They carefully 'slice' their way through even the hardest of timber grain. Far quieter, far smoother finish than with a single blade.

MACHINERY & ACCESSORIES

SAW STOP

SawStop's patented safety system stops a spinning blade on contact with skin. The blade stops in less than 5 milliseconds and drops below the table, minimising a potentially life-altering injury to a mere scratch.

SS-400H

There's no better machine for making small or intricate projects, such as toys, puzzles, signs or ornaments, than a scroll saw! SS-400H features an integrated foot switch for hands-free switching and control. A flexible and detachable rotary tool is included to help add some personal touches to your work, sand, grind and even drill some small starter holes so you can experiment with pinhole and intricate scrolling.

PEGAS

Woodturning is having a massive resurgence in popularity. Your project can be started and completed in a day with only a few basic tools and a lathe, available in a variety of sizes and configurations.

Mini Lathes are usually designed to be light enough to be moved onto a workbench and stored away when not being used. When choosing your mini lathe, consider its 'swing-over' capacity, and the maximum length between the head and tail stocks. This will dictate the maximum length of your completed project. It's a great start on your journey to learn to turn, with models available under \$1000 - see WL-B440H.

Midi lathes offer some extra 'swing-over' capacity and extra power. They can also be a full featured, full-size lathe, with a modified and shortened bed, giving you a compact footprint but more versatile machine. It's a great upgrade from a mini lathe, where your skills are growing, but your workshop space isn't - see TK-55701.

Full-sized lathes are for many turners the first and the last lathe they ever buy. Where space permits, a full-sized lathe is just as capable at small, intricate project work as it is at creating a four-poster bed. It has the widest choice of features, drive types, power etc. Many have outboard turning capabilities, to allow turning pieces of a very large diameter. Higher power for great control and quicker work. See TK-55711, TK-ORION-SE, LGT-REVO models & WL-1100P.
